

Marketing + design direction

A production-ready brief for launch banners, social graphics and campaign copy.

USER DEPOSIT • USDG

BASKET TARGETS

NVDA

AAPL

GOOGL

QQQ

NFLX

CURRENT STATUS	Mainnet deployed	Deposits gated by timelock
PUBLIC URL	mag7-index.vercel.app	Robinhood Chain • 4663

Important: banners can be prepared now. Do not publish “deposits open,” “live investing,” or any equivalent launch claim until the timelocked activation has executed and the operator has confirmed the live interface.

What MAG7 is

MAG7 Index Vault is an on-chain index vault on Robinhood Chain. Users deposit USDG and receive ERC-4626 vault shares representing a proportional interest in a managed basket of tokenized market exposures.

THE SIMPLE STORY

01	DEPOSIT	A user deposits USDG into the vault.
02	ALLOCATE	A keeper routes approved trades through Voxelithic and maintains the configured basket and reserve.
03	HOLD / EXIT	The user holds one MAG7 share position, then redeems available USDG or exits in kind into proportional basket assets.

WHO IT IS FOR

- Crypto-native users who want a simpler way to hold a basket of tokenized market exposures.
- Robinhood Chain users who value transparent allocations and on-chain share accounting.
- Builders and researchers interested in composable vault and oracle infrastructure.

POSITIONING LINE

Five market exposures. One on-chain position.

Use "market exposures" or "basket assets." Do not call the basket five independent companies: QQQ is an ETF and overlaps economically with some of the named companies.

Copy system

Lead with simplicity, transparency and on-chain structure. Keep the technical system as proof—not as the headline.

PRIMARY HEADLINES

Five market exposures. One on-chain position.

Hold the basket, not the complexity.

One vault. Five market leaders.

Index exposure, built on Robinhood Chain.

SUPPORTING COPY

- Deposit USDG. Receive one transparent vault-share position.
- Equal targets across the invested basket, with a minimum idle USDG reserve after rebalancing.
- See the basket, the reserve and the rules before you connect.
- Powered by on-chain share accounting and Voxelithic execution routing.

CTA BANK

PRE-LAUNCH	Explore the vault · View the basket · Read how it works
AFTER OPEN	Connect wallet · Deposit USDG · Review deposit

VOICE

Calm, precise, infrastructure-led. Short sentences. No hype. Let the diagram and the rules communicate confidence.

What the creative must get right

NETWORK	Robinhood Chain mainnet · chain ID 4663
VAULT	ERC-4626 share vault; deposits are made in USDG
BASKET	NVDA, AAPL, GOOGL, QQQ and NFLX
TARGETS	20% each of the invested basket
RESERVE	At least 20% idle USDG after rebalancing
EXECUTION	Approved swaps route through Voxelithic
PRICING	Keeper-fed on-chain price data with freshness checks
GOVERNANCE	2-of-3 Safe, 48-hour timelock and guardian pause
EXITS	USDG redemption subject to available liquidity, plus price-independent in-kind exit

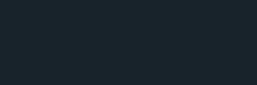

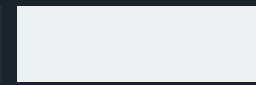

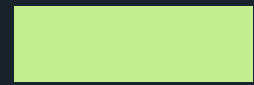

WEIGHT CLARIFIER

The 20% target applies to each sleeve of the invested basket, not total vault NAV. With 20% of the vault idle and 80% invested, each balanced sleeve is approximately 16% of total vault value.

VOXELITHIC RELATIONSHIP

Safe phrasing: “MAG7 uses Voxelithic for execution routing.” Do not say “official partner,” “endorsed by,” or “built by Voxelithic” unless a partnership is separately confirmed in writing.

Institutional, editorial, technical

				
VAULT #18232B	PANEL #202D36	TEXT #EDF0F1	MUTED #9AA7B1	ACCENT #C4EE91

TYPE

INTER	Headlines, body copy and buttons. Clean, neutral, spacious.
IBM PLEX MONO	Micro labels, tickers, percentages, network and system metadata.

STOCK ACCENTS

NVDA	#76B900	AAPL	#D5D9DF	GOOGL	#4285F4
QQQ	#0057B8	NFLX	#FF4054	VAULT	#C4EE91

ART DIRECTION

- Use thin rules, grids, schematics, allocation paths, the vault cube and colored data dots.
- Keep generous negative space and a single focal system diagram per composition.
- Use the current text wordmark: MAG7 INDEX VAULT. There is no approved standalone logo mark yet.
- Avoid glossy 3D coins, rockets, candlestick clutter, neon cyberpunk, stock photography and fake trading screens.

Three ready directions

A • ALLOCATION FLOW

Five market exposures. One on-chain position.

Use the live-system motif: USDG enters the vault; five brand-colored paths leave the vault toward the basket. CTA: Explore the vault.

B • FIVE INTO ONE

Hold the basket, not the complexity.

Five ticker-colored dots converge into a single MAG7 share shape. Keep reserve and governance detail as micro labels. CTA: View the basket.

C • BUILT WITH RULES

Transparent by design.

Vault cube centered inside a technical grid. Surround it with three proof points: equal basket targets, 20% minimum reserve, 48-hour governance delay. CTA: Read how it works.

PRODUCTION SIZES

X / social header	1500 × 500	Landscape post	1600 × 900
Open Graph	1200 × 630	Square social	1080 × 1080
Story / vertical	1080 × 1920	Launch hero still	1440 × 900

LAYOUT RULE

Reserve at least 10% safe margin on every edge. Keep headline to two lines maximum. One CTA only. Never place legal or status qualifiers below platform crop zones.

Claims and launch checklist

USE

On-chain index vault · transparent basket · ERC-4626 shares · uses Voxelithic for routing · governed by Safe + timelock

QUALIFY

Target weights · available liquidity · estimated position value · scheduled launch · tokenized market exposure

DO NOT USE

Guaranteed returns · risk-free · audited · officially affiliated with Robinhood · always liquid · real stock ownership
· live deposits before confirmation

REQUIRED RISK LINE

Tokenized market assets can lose value and may carry issuer, custody, liquidity, transfer and regulatory risks. Vault shares are not direct company-stock ownership.

LAUNCH STATUS

- Mainnet contracts are deployed and the public interface is available.
- Deposits remain closed until the scheduled timelock operation is executable, executed and verified.
- Use pre-launch CTAs now. Replace them with deposit CTAs only after an operator confirms the live state.
- Oracle V2 is a future infrastructure enhancement. It is not required in current banner copy and must not be advertised as shipped.

FINAL CREATIVE CHECK

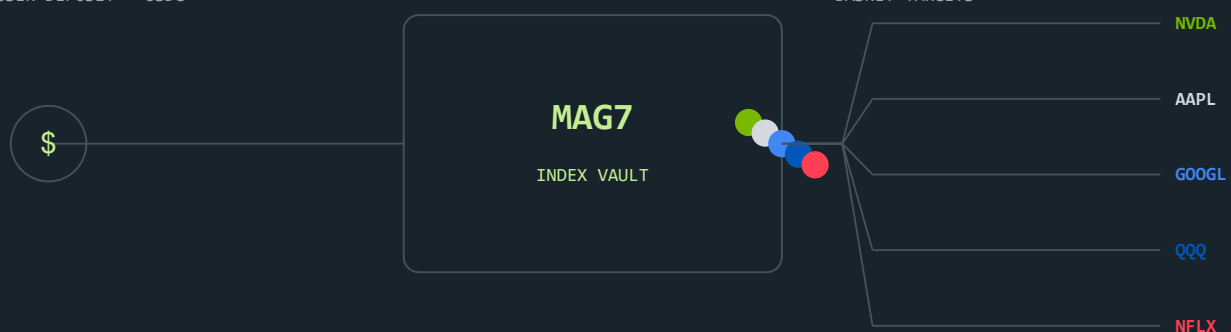

- Exact basket shown: NVDA / AAPL / GOOGL / QQQ / NFLX
- QQQ presented as an ETF exposure—not a fifth company
- 20% shown as invested-basket target, not total-vault allocation
- No audit, guarantee, partnership or official-affiliation claim
- Correct launch-state CTA and risk line included

Source of truth

The live interface and on-chain configuration are authoritative. If copy conflicts with either, pause publication and request product approval.

USER DEPOSIT · USDG

DESIGNER HANDOFF

Start with Direction A: Allocation Flow. It is closest to the live product, communicates the product in one glance and provides a reusable visual system for subsequent launch assets.
